

ABSTRACT OF THE DISKLOSURE

Four filling recesses 14 are formed on an inner peripheral surface of a fitting groove 5, which is formed concentrically with a light passage hole in a holder 3, 5 at intervals of 90 degrees in a circumferential direction. A bottom surface 14a of each filling recess 14 is inclined from one end face 3a of the holder 3 toward a lens receiving seat 6, such that a longitudinal sectional shape of each filling recess 14 is formed in a substantially triangular 10 shape.
